

Welcome!

Please be seated for the entire performance!

Using the Wee Hoose saves up to 12,500 litres of water per person, per year.

Boys must sit down to wee so the waste is kept separate. If any wee accidentally goes in the rear compartment, just pop some sawdust on top, or similar, to soak it up.

Your diluted wee can be used as fabulous plant fertiliser, directly on the soil around plants.

When you do a No. 2, take a handful of sawdust, or similar, and cover it to keep it dry.

A dry No.2 will not smell.

Lift the lid and check the bucket, and bottle, if you have one, regularly, to make sure that they do not overflow.

Once your containers are ready for emptying take them and thoughtfully give the contents back to the earth.

Your compost is great for the environment, it gives nourishment to the plants and flowers, naturally.

By using the compost toilet, you are giving the world a hug.
